Client New Puppy Notes

Congratulations on your new fur baby! Here are some notes to FAQ'S we often get; however, we are more than happy to answer any specific questions you may have!

1. We utilize **Inushuk marine 26/16** formula kibble for the **pups and adult dogs**. Best price we have found is available with a subscription to **Chewy.com**. We recommend you stay with the same food as changes can bring on tummy issues. New water may also cause mild upset at first.
2. Keep **pumpkin pie filling and a probiotic** powder for dogs on hand for diarrhea.
3. Feeding recommendations:
   Start your pup out with **¾ - 1 cup twice daily**. They are used to eating at 8 am and 5 pm. However, pups will generally eat approximately 4 cups per day while they are maturing. **Adult dogs eat 2-3 cups per day and they are fed only at night**. (It's best they "rest after eating) and this will make them "poop" in the morning when you arise. Add some warm water to every feeding to "**float" the kibble**. This is best to help with digestion and gives them extra hydration.
4. **For Teething**- Be sure to buy Y-**shaped Nyla Bonz** or **Bene-bonz** for you puppy to teeth on. **Frozen carrots** and **apples** are great option as well. **Milk Bones** once per day for teeth cleaning.
5. Create a **canine "first-aid kit'** on hand. Amazon has many options to choose from.
6. **Heartworm meds**- we do not recommend Simparica Trio -It as it can cause seizures in some dogs. Heartguard Plus or NexGard Plus (also covers fleas and ticks) are what we would recommend for your pup. Seresto collars are a great option; for ticks only. This may be couples with Ivermectin for heart worm prevention. Discuss options with your vet.
7. **Start training** your pup. Keep sessions short (10-15 minutes) and do several a day. Short sessions of perfection are much more important than long sessions of mediocrity.
8. **SIT** is the most important command – don't worry about "STAY" at this point; Sit means that they "stay" until another command is given. Use tiny training treats such as **rabbit bitz** or single kernels of kibble to reinforce behavior. Let us know when you are beginning to train leash work, we can send you some links to videos of what that looks like.
9. Conduct **obedience and retrieving** in **separate sessions**. Utilize a 20-30' **biothane** "**check cord**" (rope will give burns). This will prevent your pups from taking "victory laps" with the bumper. Retrieving exercises in a house hallway is another great technique.
10. Your pup has begun **crate and litter box training** while at the kennel. Continue the process. That is their safe space and will help with potty training. They are familiar with going on the alfalfa in their litter box and will seek grass. We suggest "snuggle pups" that mimic a heartbeat if your pup needs additional comfort. (Amazon or Chewy)
11. Your puppy has been conditioned to a "here" whistle (3 "tweets"). Please continue that as it is imperative in training later.
12. We offer **individualized training programs** here you may wish to consider. Please reach out to **Gary at 218-606-0533** if you would like to discuss options. Possibilities include but are not limited to: **Basic Bird and Gun** – (4 months of age) to acclimate your dog to loud noises, gunfire and live birds (2 weeks incl. birds and food at $950) **formalized training** built for the venue to wish to pursue- ($1250 per month). We offer personalized **boarding** for Den pups at $75 per 24 hours.
